

LAB | Build and Deploy micro-service based app using Docker

The screenshot displays a VS Code editor with the following components:

- EXPLORER:** Shows the project structure under 'COMPOSE-DEMO', including 'example-voting-app' and its associated files (.env, app.py, docker-compose.yml, Dockerfile, requirements.txt).
- PROBLEMS:** Empty.
- TERMINAL:** Contains the following output:

```
vote-1 | 127.0.0.1 - - [21/May/2026 18:52:15] "GET / HTTP/1.1" 200 -
vote-1 | 127.0.0.1 - - [21/May/2026 18:52:33] "GET / HTTP/1.1" 200 -
vote-1 | 127.0.0.1 - - [21/May/2026 18:52:48] "GET / HTTP/1.1" 200 -
vote-1 | 127.0.0.1 - - [21/May/2026 18:53:06] "GET / HTTP/1.1" 200 -
vote-1 | 127.0.0.1 - - [21/May/2026 18:53:21] "GET / HTTP/1.1" 200 -
seife@SeifEddine:/mnt/c/Users/seife/compose-demo/example-voting-app$
seife@SeifEddine:/mnt/c/Users/seife/compose-demo/example-voting-app$ docker compose ps
```
