

lab-using-foreach-meta-argument

The screenshot shows a VS Code editor interface with a dark theme. The Explorer sidebar on the left displays the file structure under 'TERRAFORM-FOREACH-LAB', including files like `providers.tf`, `variables.tf`, `terraform.tfvars`, `main.tf`, `.terraform`, `.terraform.lock.hcl`, `README.md`, `terraform.tfstate`, and `terraform.tfvars`. The `main.tf` file is open in the editor, showing Terraform code for an `aws_instance` resource using the `foreach` meta-argument. The terminal at the bottom shows the output of a `terraform apply` command, indicating that four resources were added successfully. The status bar at the bottom shows the current file is `main*` at line 24, column 2, with 4 spaces, UTF-8 encoding, and CRLF line endings.

```
1  resource "aws_security_group" "allow_ssh" {
5      ingress {
10  }
11  }
12
13  resource "aws_instance" "ec2" {
14      for_each = var.ec2_instances
15
16      ami          = var.ami_id
17      instance_type = var.instance_type
18
19      depends_on = [aws_security_group.allow_ssh]
20
21      tags = {
22          Name = each.value
23      }
24  }
```
