

lab-containerizing-multiple-apps-with-docker-compose

The screenshot displays the Visual Studio Code interface with three main panels: Explorer, Problems, and Terminal.

EXPLORER: Shows the file structure for the 'COMPOSE-DEMO' project. The 'OPEN EDITORS' section lists 'app.py'. The 'COMPOSE-DEMO' section lists 'example-voting-app', '.env', 'app.py', 'docker-compose.yml', 'Dockerfile', and 'requirements.txt'.

PROBLEMS: Empty.

TERMINAL: Shows the output of a series of GET requests and the 'docker compose ps' command.

GET requests from 127.0.0.1:

```
127.0.0.1 - - [21/May/2026 18:52:15] "GET / HTTP/1.1" 200 -
127.0.0.1 - - [21/May/2026 18:52:33] "GET / HTTP/1.1" 200 -
127.0.0.1 - - [21/May/2026 18:52:48] "GET / HTTP/1.1" 200 -
127.0.0.1 - - [21/May/2026 18:53:06] "GET / HTTP/1.1" 200 -
127.0.0.1 - - [21/May/2026 18:53:21] "GET / HTTP/1.1" 200 -
```

Commands and output:

```
seife@SeifEddine:/mnt/c/Users/seife/compose-demo/example-votin
g-app$
seife@SeifEddine:/mnt/c/Users/seife/compose-demo/example-votin
g-app$ docker compose ps
```
