

LAB | Meta Arguments in Terraform

The screenshot shows the Visual Studio Code interface with a Terraform configuration file named `main.tf` open. The Explorer sidebar on the left shows the project structure, including `main.tf` and `terraform.tfstate`. The main editor displays the Terraform code, which includes a `for_each` meta-argument for creating an `aws_s3_bucket` resource. The terminal at the bottom shows the output of a `terraform apply` command, indicating successful resource creation.

```
29
30 #####
31 # Meta Argument: for_each
32 #####
33
34 resource "aws_s3_bucket" "bucket" {
35     for_each = toset([
36         "seife-meta-demo-2026-001",
37         "seife-meta-demo-2026-002"
38     ])
39
40     bucket = each.value
41 }
42
43 #####
44 # Meta Argument: depends_on
45 #####
46
47 resource "aws_s3_bucket" "logs" {
48     bucket = "seife-meta-logs-2026"
```

Plan: 0 to add, 0 to change, 7 to destroy.

Error: Instance cannot be destroyed

on main.tf line 66:

```
66: resource "aws_s3_bucket" "protected" {
```

Resource aws_s3_bucket.protected has lifecycle.prevent_destroy set, but the plan calls for this resource to be destroyed. To avoid this error and continue with the plan, either disable lifecycle.prevent_destroy or reduce the scope of the plan using the -target option.
