

lab-deploy-configure-nginx-reverse-proxy

The screenshot shows the Visual Studio Code interface with a file explorer on the left and a code editor on the right. The file explorer shows a project named 'JINJA-LAB' with files like '.terraform', 'templates', 'terraform.lock.hcl', 'deploy.yml', 'inventory', 'jinja-lab-seif.pem', 'main.tf', 'outputs.tf', 'provider.tf', 'terraform.tfstate', 'terraform.tfstate.backup', 'terraform.tfvars', and 'variables.tf'. The code editor shows the 'deploy.yml' file with the following content:

```
1 ---
2 - hosts: web
3   become: yes
4
5   tasks:
6     - name: Copy Jinja2 template
7       template:
8         src: templates/index.html.j2
9         dest: /var/www/html/index.html
10
```

The terminal at the bottom shows the command 'cat deploy.yml' being executed, displaying the same content as the code editor.

The terminal window shows the command 'ls -R' being executed, displaying the directory structure of the project:

```
seife@SeifEddine:/mnt/c/Users/seife/OneDrive/Desktop/LABS etc/week07/
jinja-lab$ ls -R
.:
deploy.yml      outputs.tf      terraform.tfstate.backup
inventory       provider.tf     terraform.tfvars
jinja-lab-seif.pem templates       variables.tf
main.tf         terraform.tfstate

./templates:
index.html.j2
seife@SeifEddine:/mnt/c/Users/seife/OneDrive/Desktop/LABS etc/week07/
jinja-lab$
```
