

lab-using-variables-ansible

The screenshot shows the VS Code interface with the Explorer sidebar on the left. The 'WEEK07' folder is expanded, showing 'sample-ansible-playbooks'. Inside this folder, 'variables.yml' is selected. The main editor displays the content of 'variables.yml'.

```
1 ---
2 - name: Demonstrate variables in Ansible
3   hosts: all
4   gather_facts: no
5
6   vars:
7     package_name: apache2
8     service_name: apache2
9
10  tasks:
11    - name: Display package name
12      debug:
13        msg: "Package to install is {{ package_name }}"
14
15    - name: Display service name
16      debug:
17        msg: "Service to manage is {{ service_name }}"
```

The screenshot shows the VS Code terminal window with the output of an Ansible playbook run. The output is color-coded and shows the execution of two tasks: 'Display package name' and 'Display service name'. The terminal also shows a 'PLAY RECAP' section at the bottom.

```
"msg": "Package to install is apache2"
}

TASK [Display service name] *****
*****
ok: [localhost] => {
  "msg": "Service to manage is apache2"
}

PLAY RECAP *****
*****
localhost : ok=2    changed=0    unreachable
=0    failed=0    skipped=0    rescued=0    ignored=0

seife@SeifEddine:/mnt/c/Users/seife/OneDrive/Desktop/LABS etc
/week07/sample-ansible-playbooks$
```
